#### **DETAILED ACTION**

### Claim Objections

1. Claims 1-2 and 6 are objected to because of the following informalities:

Re claim 1, line 1: Substitute "A optical disk" with "An optical disk".

Re claims 2 and 6, lines 1-2: The phrase "the data comprises statistics, audio, …" is not permitted, because in its independent claim (claim 1) the data is narrowly defined as "the data selected from the group consisting of statistics, audio, video, a secret data area, and an interactive area". The phrase "the data comprises statistics, audio, …", in claim 2 and claim 6, further broadens the claim language of its independent claim by using the transitional term "comprises" instead of "consisting of" as set forth in the independent claim 1, which is not permitted. For the purpose of examination, the examiner respectfully interprets the phrase "the data comprises statistics, audio, …" as "the data consisting of statistics, audio, …"

Appropriate correction is required.

### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1-3, 6 and 12-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamashina, Osamu (JP 10-138667-A).

Re claims 1-2 and 6: Yamashina teaches an optical disk trading card (1 in fig. 1, paragraph 13), comprising

Art Unit: 2876

a planar disk (1) having a non-data side (fig. 1a), a data side (fig. 1b), and a perimeter having a desired, irregular, non-circular shape (card 1 is a rectangle) (paragraphs 14 and 18-22); text and graphics applied to the non-data side to identify the disk as a trading card ("Fig.

1(a) is the front printing surface of trading card 1." paragraphs 19-22); and at least one element (2 in fig. 1b) of data recorded on the data side (fig. 1b) of the optical

disk (1), the data selected from the group consisting of statistics, audio, video, a secret data area,

and an interactive area ("...the circular recording part 2 which recorded information (for

example, image information, aural information or game information)..." paragraph 22, lines 1-

4); the at least one element of data related by subject matter to the text and graphics applied to

the non-data side of the disk ("...which has the association in the content of the front side

printing surface..." paragraph 22, lines 1-7).

Re claim 3: Yamashina teaches the optical trading card (1) further comprising a hole (3 in fig. 3) for receiving the spindle of a CD playback device (paragraphs 43-45).

Re claim 12: Yamashina teaches the optical trading card (1), which the data side comprising an annular data track (2 in figs. 1 and 3).

Re claim 13: Yamashina teaches the irregular, non-circular shape is a baseball player (figs. 1 and 3; paragraph 21), which is an athlete.

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/654,766

Art Unit: 2876

5. Claims 4-5 and 7-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamashina, Osamu (JP 10-138667-A) in view of Clark (US 6,511,731). The teachings of Yamashina have been discussed above.

Re claims 4 and 9: Although, Yamashina teaches the printing surface, which is printed on the front-surface/non-data-side of the disk (paragraphs 19 and 21).

Yamashina fails to specifically teach the text and graphical material is silk screened onto the non-data side of the disk.

Clark teaches the text and graphical material is silk screened onto one side of the disk (col. 1, lines 47-60; col. 2, lines 10-67).

It would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to incorporate the silk screening process onto the disk as taught by Clark to the teachings of Yamashina in order to avoid the hole in the center of the disk to allow the text and/or graphical design to be on a unitary design wherein the hole is completely covered and invisible (col. 1, lines 47-52 and col. 2, lines 51-56).

Re claims 5, 7-8, 10-11: Yamashina fails to specifically teach or fairly suggest the text and graphical material is on an adhesive label, which is applied to the non-data side of the disk (as set forth in claim 5); wherein the adhesive label is foil or paper (as set forth in claims 7 and 8, respectively); wherein the adhesive label having a plurality of intersecting slits positioned over the hole of the disk (as set forth in claim 11).

Clark teaches a label (10A, 10B, 10C in figs. 6-8) having text and/or graphics material thereon, which is adhered to the side of the disk (col. 5, lines 23-26; col. 2, lines 14-16; col. 48-50) (as set forth in claim 5); wherein the label (10) is any suitable sheet material 11, such as

Application/Control Number: 10/654,766

Art Unit: 2876

paper or plastic foil (col. 5, lines 1-3; col. 2, lines 26-28) (as set forth in claims 7-8); wherein the adhesive label (10) having a plurality of intersecting slits (12) positioned over the hole (23) of the disk (col. 5, lines 7-10) (as set forth in claim 11).

It would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to incorporate the adhesive label having text and/or printed material thereon to identify the subject matter of the optical disk as taught by Clark to the teachings of Yamashina in order to allow the user to easily apply the label to the side of the optical disk.

#### Conclusion

Examiner's note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tobol et al. (US 5,715,934) teaches a cd-rom label with positioning means. Clark (US 6,899,942) teaches an optical disk label and method. Gluck (US 5,803,501) teaches memorabilia card. Gu (US 6,282,819) teaches design and manufacture of communicating card.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimberly D. Nguyen whose telephone number is 571-272-2402. The examiner can normally be reached on Monday-Friday 7:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on 571-272-2398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
